

RADIO AMATEUR HERE GETS BRITAIN

E. T. Hall Sets Record for Milwaukee Thursday Night.

The first case in Milwaukee of receipt, by an amateur, of a radio signal from England was recorded at 11:17 o'clock Thursday night at the home of E. T. Hall, 641 Van Buren street, president of the Milwaukee Radio Amateurs' club, according to L. S. Hillegas-Baird, business manager of the club.

The operator at the receiving station, Mr. Baird said, was Louis A. Wolloger, with a "modified zenith" tuner set for a wave length of 150 meters.

The signal came from station "British 1 A R," the exact location of which in England has not yet been learned, and consisted only of the code word, "NPCII."

The transatlantic tests are being made under the auspices of the American Radio Relay league, and prizes will be awarded amateurs receiving and reporting the code words correctly.
